Tester (QA) Week3 Task

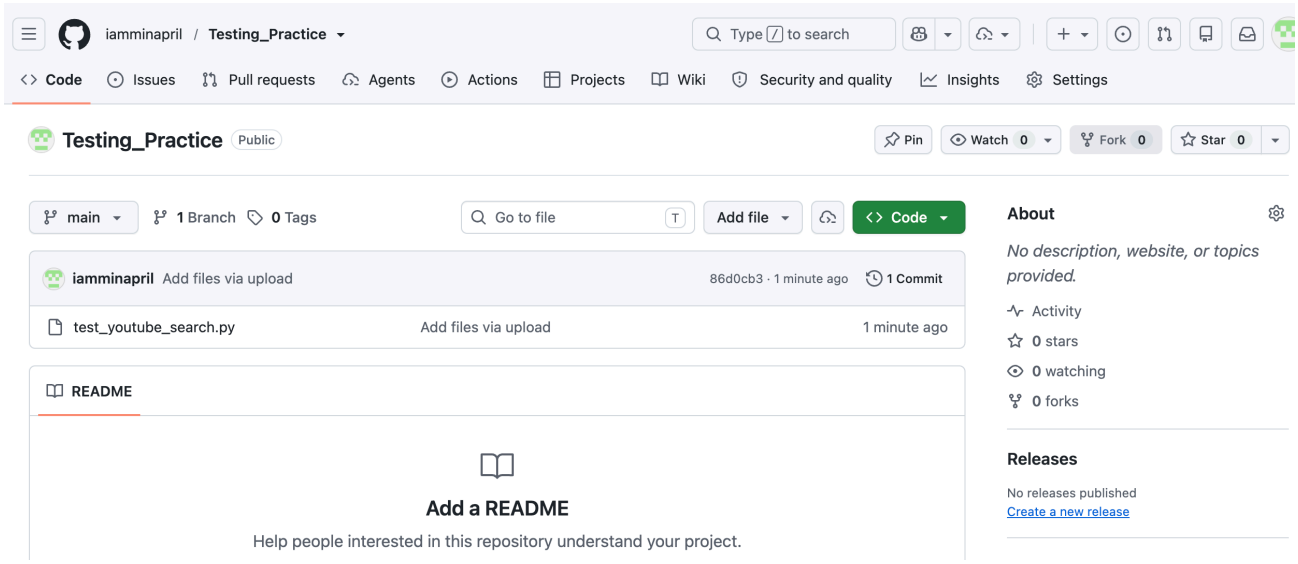

Friday, September 18, 2026 11:58

Practice: Push your Selenium tests to a GitHub repo, and set up a free GitHub Actions workflow to run them automatically on push. Log all bugs found across the 3 weeks into a Jira board with severity/priority tagged.

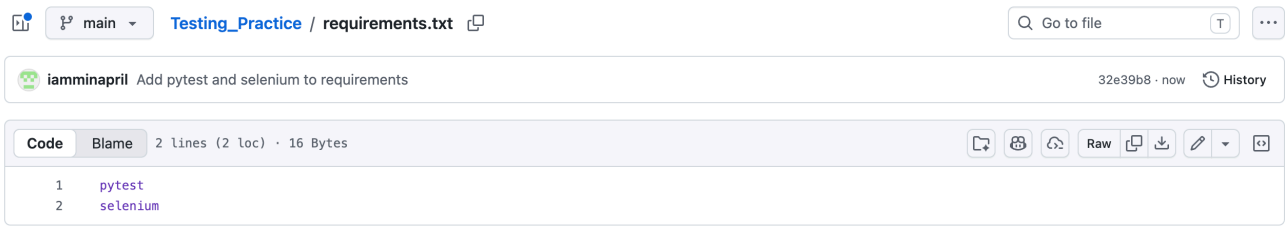

1. Create a new repo

2. Upload an existing file "test_youtube_search.py"

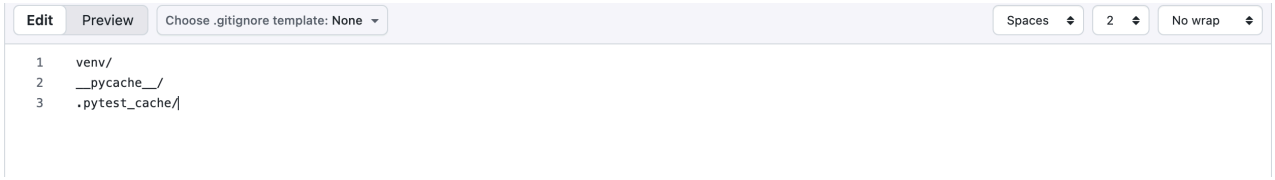

3. Click "Add file", create a "requirement.txt" file

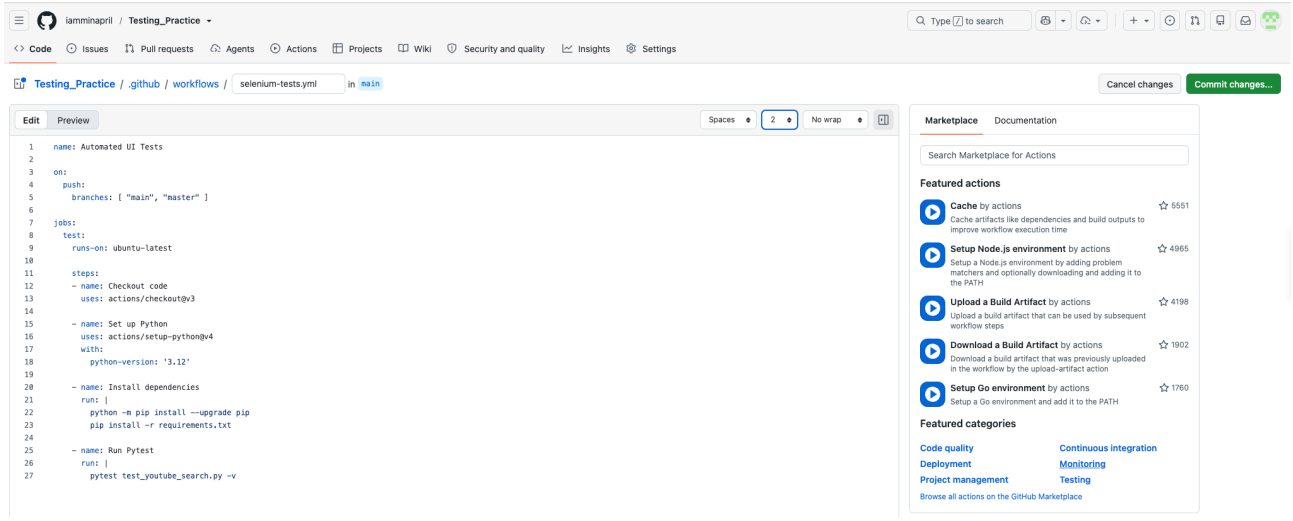

4. Click "Add file", create a ".gitignore" file

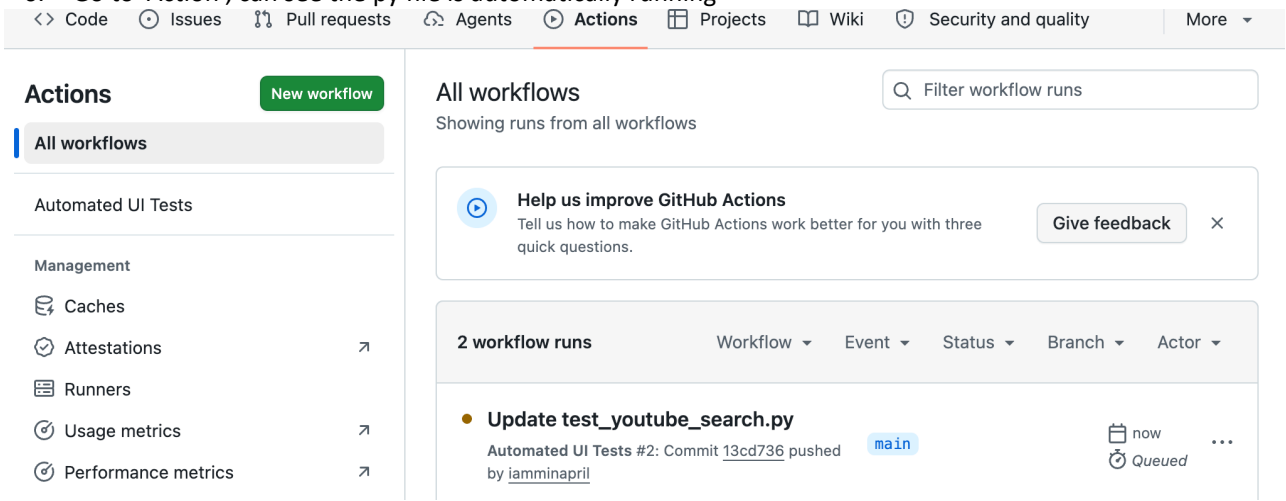

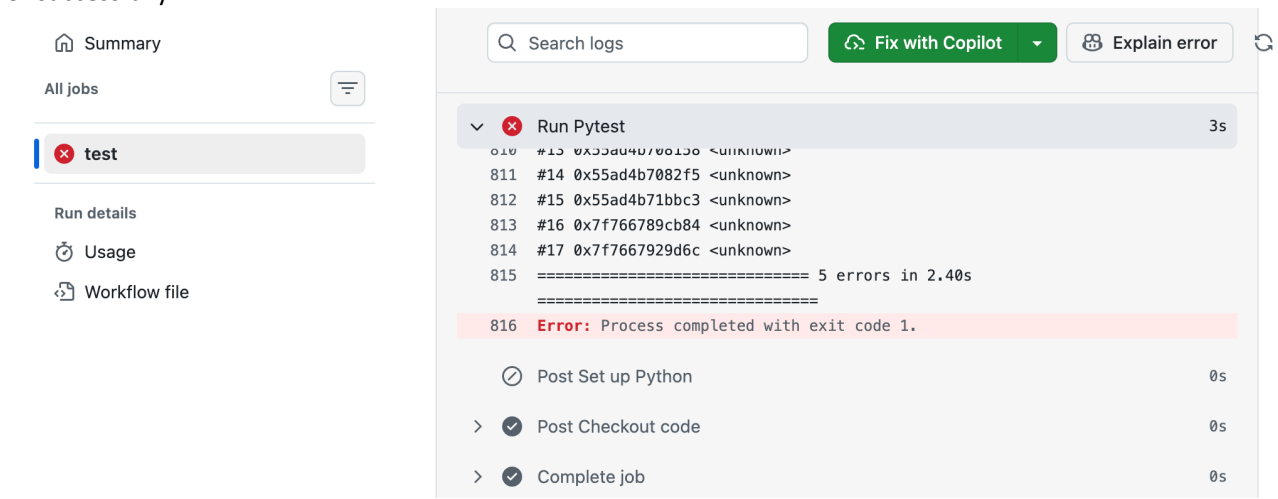

5. Click "Add file", create a ".github/workflows/selenium-tests.yml" file

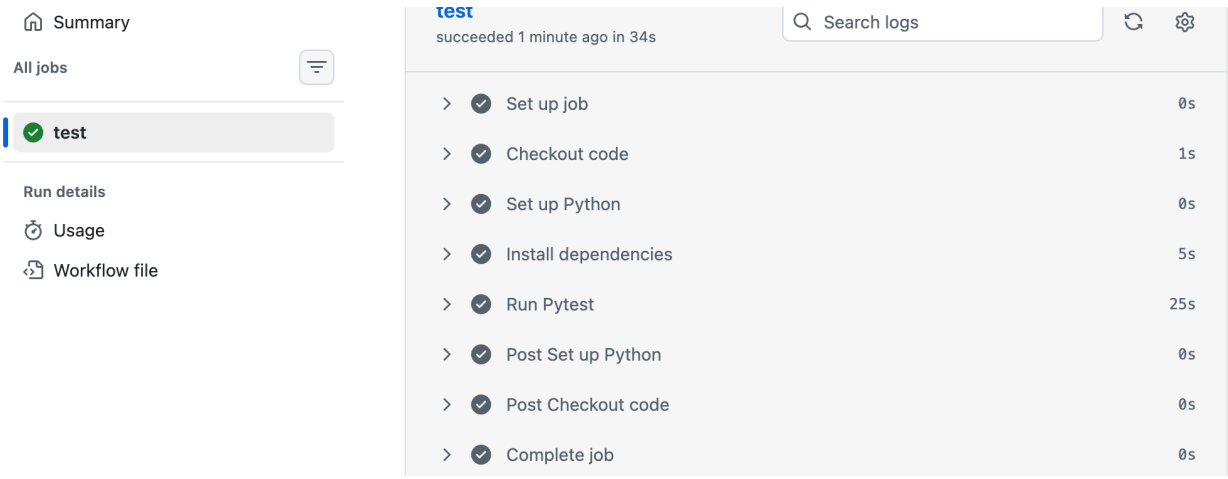

6. Go to 'Action', can see the py file is automatically running

Unsuccessfully

Successfully pass test
