SUMMARY

Detail-oriented professional pursuing a career as a Quality Assurance Tester. Demonstrated capability in the full software testing lifecycle through intensive project execution, including manual test case design, defect tracking (Jira), and API validation (Postman). Hands-on experience developing End-to-End UI automation frameworks using Python and Selenium, supported by CI/CD integrations (GitHub Actions). Strong analytical problem-solver equipped to support Agile teams in delivering reliable software solutions.

CORE SKILLS

Testing & QA: Manual Test Case Design, Functional & Regression Testing, API Testing, Performance & Load Testing, BDD (Behavior-Driven Development), Security Testing Basics (OWASP Top 10), Defect Tracking (Triage), Agile/Scrum, SDLC.

Automation & CI/CD: Selenium, Postman, Pytest, Cucumber (Gherkin), GitHub Actions, Docker (Selenium Grid containerization basics).

Tools & Platforms: Jira, Confluence, Apache JMeter, OWASP ZAP, SQL Server / SSMS, Azure DevOps (familiar).

Programming & Scripting: Python, Java, JavaScript, C#, SQL.

TECHNICAL PROJECTS

Project: End-to-End E-Commerce Quality Assurance (Automation Exercise Platform)

- Authored comprehensive test plans and designed 50+ detailed manual test cases covering critical e-commerce workflows, including user authentication, product navigation, and secure checkout processes.
- Engineered a robust UI automation framework using Python and Selenium WebDriver, applying the Page Object Model (POM) design pattern to enhance script maintainability and reusability.
- Configured and maintained a CI/CD pipeline using GitHub Actions, enabling automated headless regression test execution on Ubuntu cloud runners upon every code push to the repository.
- Managed the defect lifecycle via Jira Kanban boards, accurately documenting reproducible steps and assigning priority/severity metrics (e.g., UI rendering errors, dynamic locator failures) to streamline developer remediation.

Project: FinTech API, Performance & Security Validation (ParaBank)

- Spearheaded RESTful API testing utilizing Postman to validate core banking functionalities, strictly verifying HTTP status codes, JSON schema integrity, and backend transaction logic with JavaScript assertions.
- Designed and executed load and stress test profiles using Apache JMeter, simulating high-concurrency user traffic to baseline server response times and identify potential performance bottlenecks.
- Conducted fundamental web security testing focused on OWASP Top 10 vulnerabilities (using OWASP ZAP), validating Role-Based Access Control (RBAC) and basic input sanitization (XSS/SQLi prevention).

EDUCATION

Master of Information Technology, Charles Darwin University Expected Dec 2026
Darwin, NT

***Bachelor of Public Administration*, South China Agricultural University** 09/2014 - 07/2018
Guangzhou, China

CERTIFICATIONS AND COURSES

- **Software Testing Tutorial — Youtube** (Manual Testing, Automated Testing with Selenium, API Testing with Postman, CI/CD, Test Cases writing, Functional Testing, Non-Functional Testing, End-to-End Testing, Agile Testing, Defect Report writing)
- **The Complete Quality Assurance Course — Udemy** (Manual Testing, Jira, API Testing with Postman, UI Automation with Java/C# Selenium)
